

VTST or VASPsol is not in VASP

Problem

The system-wide vasp module does not include VTST or VASPsol, as it contains no modifications to VASP.

Solution

You can compile a modified VASP in your /group directory. Have a look at [VASP](#). Ask the Pawsey helpdesk for assistance if required.

As with all software installed in your own /group directory, it is up to you to maintain it.
